By Stephen McJohn*

ABSTRACT

The Supreme Court decided more patent cases in 2014 than any previous year. It lowered the standard for awarding fees in patent cases, clarified that the patent holder carries the burden of showing infringement even in declaratory judgment actions, lowered the standard for invalidating patent claims as vague, and rejected the theory that infringement may occur by simply adding the actions of separate parties. The most important case, Alice Corp. Pty. Ltd. v. CLS Bank Int'l, announced a test for patentable subject matter, especially for software and business method inventions, that was considerably more restrictive than case law to date.

Meanwhile, the most notable case in copyright seemed to go in the opposite direction, raising the level of copyright protection for software, perhaps even creating a split in the circuits. In Oracle Am., Inc. v. Google Inc., the Federal Circuit held that the application programming interfaces of the Java programming language were copyrightable expression, as opposed to non-copyrightable functional matter. The Supreme Court held that rebroadcast of television programs infringed the public performance right, even where done using technology that effectively gave each viewer a personal antenna. The Court also rejected the application of laches in copyright cases, permitting litigation of long-standing infringement.

Other cases provided important precedent on evergreen issues in intellectual property law. Cambridge Univ. Press v. Patton reversed a safe harbor approach to the application of fair use to university coursebooks. Garcia v. Google, Inc. raised the possibility that anyone who contributes to a work, such as an actor in a film, may have their own separate copyright. Trademark cases addressed such questions as who may bring a false advertising case, when matter is functional, when trademarks become generic or are otherwise abandoned, when others may use a mark to describe things, and when a mark may be cancelled as disparaging of a group of people. In trade secret, the Third Circuit avoided the surprisingly important issue of liability for account slurping. Other cases dealt with the interfaces between trade secret and contract and between trade secret and patent. Courts also dealt with the balance between disclosing information to potential partners and maintaining sufficient security measures to qualify for trade secret protection.

INTRODUCTION

The Supreme Court decided more patent-related cases in 2014 than in any previous year. It lowered the standard for awarding fees in patent cases, clarified that the patent holder carries the burden of showing infringement even in declaratory judgment actions, lowered the standard for invalidating patent claims as vague, and rejected the theory that infringement may occur by simply adding the actions of separate parties. The most important case, *Alice Corp. v. CLS Bank International*, announced a test for patentable subject matter, especially for software and business method inventions, that was considerably more restrictive than case law to date.

Meanwhile, the most notable case in copyright seemed to go in the opposite direction, raising the level of copyright protection for software, perhaps even prompting a potential circuit split. In *Oracle Inc. v. Google Inc.*, the Federal Circuit held that the application programming interfaces of the Java programming language were copyrightable expression, as opposed to non-copyrightable functional matter. Further, the Supreme Court held that rebroadcast of television programs infringed the public performance right, even when using technology that effectively gave each viewer a personal antenna. The Court also rejected the application of laches in copyright cases, permitting litigation of long-standing infringement.

Other cases provided important precedent on evergreen issues in intellectual property law. *Cambridge University Press v. Patton* reversed a safe harbor approach to the application of fair use to university course books. *Garcia v. Google, Inc.* raised the possibility that anyone who contributes to a work, such as an actor in a film, may have her own separate copyright. Trademark cases addressed such questions as who may bring a false advertising case, when matter is functional, when trademarks become generic or are otherwise abandoned, when others may use a mark to describe things, and when a mark may be cancelled as disparaging of a group of people. In trade secret, the Third Circuit avoided the surprisingly important issue of liability for account slurping. Other cases dealt with the interfaces between trade secret and contract law and between trade secret and patent law. Courts also addressed the balance between disclosing information to

potential partners and maintaining sufficient security measures to qualify for trade-secret protection.\(^\text{15}\)

\section*{I. Patent}

\subsection*{A. Alice Corp. v. CLS Bank International\(^\text{16}\)}

\textit{Alice} will likely finally set the test for patentable subject matter. Patentable subject matter does not include abstract ideas, laws of nature, or natural phenomena.\(^\text{18}\) After leaving those exclusions undefined for decades, the Court decided three cases in recent years that help define the contours of patentable subject matter. The Court held: (1) in \textit{Bilski v. Kappos},\(^\text{19}\) that a method for hedging risk was an unpatentable abstract idea; (2) in \textit{Mayo Collaborative Services v. Prometheus Labs. Inc.},\(^\text{20}\) that a diagnostic method that simply adjusted dosages of a drug based on blood-test results was an unpatentable claim to a natural law; and (3) in \textit{Association for Molecular Pathology v. Myriad Genetics, Inc.},\(^\text{21}\) that human DNA is an unpatentable natural phenomenon. Those cases clarified the certain aspects previously unsettled case law, but left important questions open, such as whether courts should analyze the three exceptions similarly and how they applied to software patents. In 2014, the Court addressed those questions in \textit{Alice}, which dealt with the patentability of “a computer-implemented scheme for mitigating ‘settlement risk’”—i.e., the

risk that only one party to an agreed-upon financial exchange will satisfy its obligation” by using a third-party intermediary.”

¶5 Alice held that the underlying policy for all three exclusions was the risk that a patent would pre-empt a basic tool of scientific and technological work. Monopolization of such tools would impede rather than promote innovation, and thus inhibit further discovery. The Alice Court also recognized that “[a]t the same time, we tread carefully in construing this exclusionary principle lest it swallow all of patent law. At some level, ‘all inventions . . . embody, use, reflect, rest upon, or apply laws of nature, natural phenomena, or abstract ideas.’” An invention is not rendered ineligible for a patent simply because it involves an abstract concept. Further, as the Court put it, “[a]pplication[s]” of such concepts “‘to a new and useful end,’ we have said, remain eligible for patent protection.”

To balance these concerns, the Court held that a single test, drawn from Mayo, was the framework for analyzing patentable subject matter under all three exceptions:

First, we determine whether the claims at issue are directed to one of those patent-ineligible concepts. If so, we then ask, “[w]hat else is there in the claims before us?” To answer that question, we consider the elements of each claim both individually and “as an ordered combination” to determine whether the additional elements “transform the nature of the claim” into a patent-eligible application. We have described step two of this analysis as a search for an “inventive concept”—i.e., an element or combination of elements that is “sufficient to ensure that the patent in practice amounts to significantly more than a patent upon the [ineligible concept] itself.”

¶6 Applying the first part of the test, the Court held that “[l]ike the risk hedging in Bilski, the concept of intermediated settlement is ‘a fundamental economic practice long prevalent in our system of commerce.’” In this respect, the Court broadened patentable subject matter to encompass considerations of novelty and nonobviousness. Whether something is an abstract idea could now depend not just on the idea, but whether it is well-known.

¶7 Turning to the second step, the Alice court held that “the claims at issue are drawn to the abstract idea of intermediated settlement, and that merely requiring generic computer implementation fails to transform that abstract idea into a patent-eligible invention.” Although the Court never used the word “software,” this analysis has broad implications for software patents. Importantly, simply incorporating a computer in the invention will

29 On the topic of nonobviousness: Bristol-Meyers Squibb Co. v. Teva Pharmaceuticals USA, Inc. was seen by some as making it easier to find pharmaceutical inventions obvious, by raising the higher standard for unexpected results that indicate a chemical compound is nonobvious. 752 F. 3d 967 (Fed. Cir. 2014). See Gitrada Harmon, Obviousness Analysis For New Chemical Compounds (2014), draft on file with author.
30 134 S. Ct. at 2347.
not make an idea patentable. However, the Court did give some guidance as to what would make computer-related inventions patentable: “The method claims do not, for example, purport to improve the functioning of the computer itself. Nor do they effect an improvement in any other technology or technical field.”

After Alice, the framework for addressing patentable subject matter is the two-step test from Mayo. The content of those steps, however, remains uncertain. For example, the Court did not attempt to define “abstract idea.” Perhaps, this is because, at some level, every invention must rest on one or more abstract ideas. The second step likewise is flexible. It suggests that a method may be patentable if it improves the functioning of a computer or affects an improvement in some technical field. A broad reading would be that any improvement in software improves how a computer works. A narrower reading would provide patent eligibility only for software intended to make the computer itself work better, as opposed to software that accomplishes an established task in a different manner (e.g., faster, more reliably, more securely, etc.). Yet no bright-line distinction exists between the two. Likewise, “technical field” is not a clear boundary. But the underlying policy – avoiding the preemption of building-block technologies – may provide sufficient guidance. For instance, in copyright law, a similar test – the elusive distinction between non-copyrightable ideas and copyrightable expression – serving merely to clarify any policy issues, has worked well for decades.

The Federal Circuit soon implemented the approach newly defined in Alice, holding that delivering advertising with online video content to be outside patentable subject matter, which the Federal Circuit had twice previously held to be within patentable subject matter. Thus, the Federal Circuit has assuredly taken a new direction in the wake of Alice. But before the year was out, the Federal Circuit upheld a patent on a software process for maintaining the look and feel of a website, meaning perhaps that sufficiently specific software patents will survive the Alice test. In addition, as technology heads toward the Internet of Things, where online software will likely control many physical devices, various software inventions may be concrete enough to pass Alice.

B. Nautilus, Inc. v. Biosig Instruments, Inc.

Nautilus concerned a patent on a heart monitor. Specifically, some argued that the claim language indicating electrodes with a “spaced relationship” with one another was too vague, thus rendering the patent invalid.
¶11 Commentators have criticized patent claims, especially in software patents, as too vague to provide proper notice of the scope of the claimed invention.\textsuperscript{39} An inventor must submit claims “particularly pointing out and distinctly claiming the subject matter which the applicant regards as [the] invention.”\textsuperscript{40} The Federal Circuit’s test on the issue was relatively patentee-friendly, holding that a claim was only invalid for vagueness if it was “insolubly ambiguous.”\textsuperscript{41} If the court could reach any clear interpretation of the claim, it survived. As in \textit{Alice}, the Supreme Court in \textit{Nautilus} sought to balance competing policies: “The definiteness requirement, so understood, mandates clarity, while recognizing that absolute precision is unattainable.”\textsuperscript{42}

¶12 The Court formulated a test to reconcile those interests: “Cognizant of the competing concerns, we read § 112, ¶ 2 to require that a patent’s claims, viewed in light of the specification and prosecution history, inform those skilled in the art about the scope of the invention with reasonable certainty.”\textsuperscript{43}

¶13 Patent claim interpretation is notoriously difficult, because patents rely on technical language and are drafted with many goals in mind, including obfuscation.\textsuperscript{44} Every patent claim should be unique, because it should claim a unique invention.\textsuperscript{45} To determine whether a word or phrase can be understood with “reasonable certainty” in a \textit{sui generis} document may often be elusive.

\textbf{C. Williamson v. Citrix Online, LLC}\textsuperscript{46}

¶14 Clear patent claims are difficult to draft, as \textit{Nautilus} reflects. The Patent Act offers various tools to deal with that, including means-plus-function claims.\textsuperscript{47} Section 112 allows an inventor, rather than listing every element of structure in the invention, to simply describe an element as a means to accomplish a task.\textsuperscript{48} The court then interprets the patent claim to cover the means that the inventor discloses in the description of the invention.\textsuperscript{49} That makes claim drafting easier but limits the breadth of the patent claim to the means described. A product very similar to the inventor’s product, but which uses a different means for that one element, will not infringe. So applicants often avoid means-plus-function claims to avoid narrower protection.\textsuperscript{50} The Federal Circuit has reached

\textsuperscript{39} See generally JAMES BESSEN & MICHAEL J. MEURER, PATENT FAILURE: HOW JUDGES, BUREAUCRATS, AND LAWYERS PUT INNOVATORS AT RISK (2009).
\textsuperscript{40} 134 S. Ct. at 2124 (quoting 35 U.S.C. § 112, para. 2 (2006)) (alteration in original).
\textsuperscript{42} \textit{Nautilus}, 134 S. Ct. at 2129.
\textsuperscript{43} Id.
\textsuperscript{45} See 35 U.S.C. §§ 101–102 (providing that an invention is patentable only if new and not anticipated by prior inventions).
\textsuperscript{46} Williamson v. Citrix Online, LLC, 770 F.3d 1371 (Fed. Cir. 2014).
\textsuperscript{47} 35 U.S.C. § 112(f) (“An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material, or acts in support thereof.”).
\textsuperscript{48} Id.
\textsuperscript{49} Id. (“[S]uch claim shall be construed to cover the corresponding structure, material, or acts described in the specification and equivalents thereof.”).
\textsuperscript{50} See Mark A. Lemley, \textit{Software Patents and the Return of Functional Claiming}, 2013 Wis. L. REV. 905, 918 (“The result is that means-plus-function claiming today is viewed as narrow and easy for potential
inconsistent conclusions as to whether expert testimony is necessary to show a lack of structure in the means-plus-function analysis. The Federal Circuit has also held that the necessary structure, for a computer-related invention such as smartphone technology, may be found looking to a broad array of sources in the specification, such as “an outline of an algorithm, a flowchart, or a specific set of instructions or rules.”

¶15 Whether a claim is in means-plus-function form depends on how the claim is interpreted. The issue can determine an infringement case. In Williamson, the issue was whether the word “module” referred to structure or whether “module” referred to a means for accomplishing a function, meaning the claim would read only on products that contained the same means described in the patent. The majority held that “module” did connote hardware or software structure, and was not merely a “nonce” word that needed specific definition of structure from the written description of the invention.

¶16 As the case reflects, a split has developed within the Federal Circuit on the proper approach to determine if a claim is a means-plus-function claim. The issue has particular import for software patents, which often include elements in functional form. Whether that element is treated as means-plus-function can determine the breadth and validity of the claim.

D. Limelight Networks, Inc. v. Akamai Technologies, Inc.

¶17 Patent claims are often quite complex. In order to infringe a claim, all elements of the claim must be met. In some cases, different parties perform different steps of a patented process. For instance, Akamai’s patent covered a method of delivering electronic data over a content delivery network, including the step of tagging the data. Limelight allegedly performed most of the steps, but had its customers tag the data. The question in Akamai was whether that constituted infringement, if all steps were performed but not all steps performed by the same person. Specifically, secondary liability requires that there be
infringement.\textsuperscript{61} Could there be induced infringement if no single actor infringed? The Federal Circuit had held that there could be induced infringement, on the theory that the party caused others to perform steps for infringement.\textsuperscript{62} The Supreme Court rejected this theory, reasoning that there could not be secondary infringement without a direct infringer.\textsuperscript{63} In short, The Supreme Court rejected that theory of “divided infringement.”\textsuperscript{64}

Notably, the Federal Circuit could still reach essentially the same result if it rejects its earlier holding in \textit{Muniauction, Inc. v. Thomson Corp.}.\textsuperscript{65} The Supreme Court in \textit{Akamai} noted that the Federal Circuit had taken a very narrow view on joint infringement, in contrast to its broad view of divided infringement.\textsuperscript{66} In \textit{Muniauction}, the Federal Circuit had limited the application of joint infringement to where the two parties acted in a principle agency relationship or have contractual obligations.\textsuperscript{67} If courts viewed joint infringement more pragmatically, such as where a software company directs a customer to perform certain steps, then joint infringement would apply to cases facts like \textit{Akamai}. The Federal Circuit may revisit \textit{Muniauction} in light of \textit{Akamai}. This has considerable practical implications for licensing agreements. In litigation practice, parties may rely more on clauses and licensing to show joint infringement, and, in transactional practice, parties may craft agreements to avoid it.\textsuperscript{68}

\textsuperscript{61} Id.
\textsuperscript{62} Id.
\textsuperscript{63} Id. at 2117-18.
\textsuperscript{64} The briefs in \textit{Akamai} raised a remarkable argument, suggesting that the Federal Circuit approach would encourage parties to draft patent claims in the passive voice, allowing for an infringement if anyone anywhere, in aggregate, performed the steps of a patented process. \textit{E.g.}, Reply Brief for Petitioner at 21, Limelight Networks, Inc. v. Akamai Techs., Inc., 134 S. Ct. 895 (2014) (No. 12-786), available at www.americanbar.org/content/dam/aba/publications/supreme_court_preview/briefs-v3/12-786_pet_reply.authcheckdam.pdf. Such a claim drafting technique was termed the “aggressive passive voice” by participants at the Fourth IP Scholars’ Roundtable: Intellectual Property on the Ground, University of New Hampshire School of Law, November 21-22, 2014.
\textsuperscript{65} 532 F.3d 1318 (Fed. Cir.2008).
\textsuperscript{66} 134 S. Ct. at 2119.
\textsuperscript{67} Id.
\textsuperscript{68} See Jean-Paul Ciardullo & Cynthia J. Rigsby, \textit{After the Supreme Court's Limelight Decision, Attention May Shift to Contract Analysis in Patent Cases}, IP LITIG. CURRENT (July 2, 2014) http://www.iplitigationcurrent.com/2014/07/02/limelight-shift-attention-contract-analysis/.
E. Octane Fitness, LLC v. ICON Health & Fitness, Inc. & Highmark Inc. v. Allcare Health Management Systems

Octane Fitness made it easier for district courts to award attorney’s fees to successful parties in patent litigation. The Supreme Court rejected the Federal Circuit’s test for the award of attorney’s fees under the patent statute. The Federal Circuit defined an “exceptional case” as one which either involves “material inappropriate conduct” or is both “objectively baseless” and “brought in subjective bad faith.” The Court characterized the Federal Circuit’s test as rigid and unnecessarily narrow. Rather, the Court held, “an ‘exceptional’ case is simply one that stands out from others with respect to the substantive strength of a party's litigating position (considering both the governing law and the facts of the case) or the unreasonable manner in which the case was litigated.” The Court considered the totality of the circumstances, permitting a much broader approach than the Federal Circuit had permitted.

A companion case, Highmark, also made it more likely that a trial court’s award of attorney’s fees would survive. The Supreme Court overturned Federal Circuit precedent reviewing such decisions de novo, holding instead that a district court decision to award attorney’s fees is subject to review only as to whether it was an abuse of discretion.

These two cases changed the dynamics of patent enforcement. On the one hand, it is now riskier to seek enforcement of a questionable patent. On the other, it is now riskier to resist enforcement of a valid patent. Confident parties choosing to resist dubious patent claims now find themselves in a better position.

F. Medtronic, Inc. v. Mirowski Family Ventures, LLC

Several years back, MedImmune, Inc. v. Genentech, Inc. lowered the standard for bringing declaratory judgment actions in patent cases by making it easier to challenge patents. The case left several questions open, including who would have the burden of proof. If a patent holder sues for infringement, the patent holder has the burden of

---

71 134 S. Ct. at 1758. (“Nothing in [35 U.S.C.] § 285 justifies such a high standard of proof. Section 285 demands a simple discretionary inquiry; it imposes no specific evidentiary burden, much less such a high one.”).
72 Id. at 1756 (“This formulation superimposes an inflexible framework onto statutory text that is inherently flexible.”).
74 Octane Fitness, 134 S. Ct. at 1756.
75 Id.
76 Id.
78 Id. at 1749 (“We therefore hold that an appellate court should apply an abuse-of-discretion standard in reviewing all aspects of a district court’s § 285 determination.”).
81 As the Medtronic court put it, the open question was: “A patent licensee paying royalties into an escrow account under a patent licensing agreement seeks a declaratory judgment that some of its products are not covered by or do not infringe the patent, and that it therefore does not owe royalties for those

327
showing infringement. If, instead, an alleged infringer sues, seeking a declaratory judgment that it is not infringing, does it bear the burden of showing noninfringement? Medtronic held that the burden of showing infringement rests on the patent holder. Any other rule would create a possible inconsistency in determinations, as well as a possible chill against parties subjected to likely invalid intellectual property rights. The Court reasoned that the licensee may have initiated the suit, but the patent holder “is in a better position than an alleged infringer to know, and to be able to point out, just where, how, and why a product (or process) infringes a claim of that patent.” Medtronic removes a significant obstacle to challenging patents. If the burden of proof of noninfringement were on the party bringing a declaratory judgment action, that would make parties less likely to file suit to challenge patents.

G. Apple Inc. v. Motorola, Inc.

Apple Inc. v. Motorola, among other things, makes it more difficult for a party holding the patent on industry standards to prevent others from using those standards, even where no license agreement is in effect. A party with such a standard essential patent may have agreed in general to license it to others in the industry under reasonable and nondiscriminatory terms. There may be considerable disagreement however about what terms are reasonable. Until other parties have obtained such a license, the patent holder might seek an injunction to prevent them using the relevant technology. Motorola, however, held that an injunction may not necessarily be awarded in such a case. One factor for injunctive relief is whether a sufficient remedy is available through damages. The court held that damages may be sufficient, making an injunction unavailable, because the right to pay royalties and use the technology has been established by agreement.

The holding may cut two ways with respect to standard-setting patents. Where a party has agreed to contribute a standard-setting patent, others may use the standard knowing that they will be likely subject only to damages for a reasonable royalty, as opposed to an injunction against use. That may speed licensing transactions. But the holding may delay the initial contribution, because a party with a potential standard patent will know that once it agrees to contribute the patent, it will no longer have control over whether others use the technology.

products. In that suit, who bears the burden of proof, or, to be more precise, the burden of persuasion? Must the patentee prove infringement or must the licensee prove noninfringement?” 134 S. Ct. at 849..
Qimonda AG, a German semiconductor manufacturer, had patent cross licenses with many of its competitors. In industries like electronics, such licenses allow parties to have a truce with respect to patents. Qimonda filed bankruptcy and ceased operations, so no longer needed the protection of the cross licenses. Rather, it terminated the licenses under German bankruptcy law, to renegotiate licenses under which it would instead receive royalty payments.

Qimonda filed a chapter 15 bankruptcy proceeding in the United States, to do the same with its American licenses. The representative “committed to re-license Qimonda's patent portfolio to the Licensees at a reasonable and nondiscriminatory ("RAND") royalty.” Chapter 15 of the Bankruptcy Code allows the representative of a foreign bankruptcy proceeding to file an ancillary proceeding in the United States. It also allows broad recognition of orders entered in the foreign bankruptcy proceeding. But the recognition is subject to certain safeguards. The US bankruptcy court may refuse to apply the foreign order if “the action would be manifestly contrary to the public policy of the United States.” In addition, the court must ensure that “the interests of the creditors and other interested entities, including the debtor, are sufficiently protected.”

US bankruptcy law provides special protection for intellectual property licensees. Even where a bankrupt licensor rejects the license in bankruptcy, the licensee may continue to use the rights, provided it performs its obligations under the license. German bankruptcy law, by contrast, allows a licensor to simply terminate a license. Jaffé addressed a question with little precedent, given that Chapter 15 is relatively new: how extensive are the limits to recognizing foreign rules within US bankruptcy proceedings? In particular, is the applicable standard relatively high, rejecting only foreign orders that are “manifestly contrary to the public policy of the United States,” or also broadly protective, requiring general protection of all interested parties? Jaffé blended the standards somewhat. It upheld refusal to terminate the licenses, because termination would adversely affect the licensees (by denying them the protection normally afforded under US law), which in turn would affect public policy, because harm to the licensees might “slow the pace of innovation in the United States, to the detriment of the U.S. economy.”

I. Tyco Healthcare Group LP v. Mutual Pharmaceutical Co.\textsuperscript{107} & DSM Desotech Inc. v. 3D Systems Corp.\textsuperscript{108}

Antitrust liability will normally not lie for filing a patent infringement suit against a competitor, under the doctrine of "Noerr-Pennington immunity."\textsuperscript{109} But that immunity will not be obtained if the litigation is a sham, brought baselessly simply to harm competition.\textsuperscript{110} Tyco addressed two issues with respect to that interplay between the exclusionary power of a patent and anti-trust law’s limits on exclusionary conduct that harms competition.\textsuperscript{111} First, the court held that liability for fraudulent procurement of patents could apply where a party does not fraudulently obtain patents, but acquired them with and has the requisite knowledge, but that the necessary knowledge was not shown in that case.\textsuperscript{112} It also held that litigation to enforce of the patents was not baseless as matter of law, because the patent owner proposed a factually plausible theory of infringement.\textsuperscript{113}

But, beyond patent litigation, the patent owner had also filed a petition with the Food and Drug Administration to prevent the generic maker from marketing its version of the drug.\textsuperscript{114} The patent owner argued that the sham exception to immunity was limited to litigation in court.\textsuperscript{115} Only a patent law suit that was manifestly contrary to governing

¶32 *In re Roslin Institute* addressed the issue, as applied to a famous sheep.\(^{126}\) It held patents related to the famous cloned sheep Dolly to be invalid, for failure to claim sufficient differences between the sheep providing the source of the cloned cells and the resulting cloned animal.\(^{127}\) The patentee pointed to differences between a clone and a natural version of an organism but failed to show that the patent claims included those characteristics.\(^{128}\)

II. TRADEMARK

A. *Lexmark International, Inc. v. Static Control Components, Inc.*\(^{129}\)

¶33 The federal trademark statute provides a cause of action much broader than trademark infringement: false advertising.\(^{130}\) Section 43(a) of the Lanham Act imposes liability on anyone who “in commercial advertising or promotion, misrepresents the nature, characteristics, qualities, or geographic origin of his or her or another person’s goods, services, or commercial activities.”\(^{131}\) Not everyone aggrieved by false advertising, however, can sue under this provision. Lexmark's old printers and toner cartridges.\(^{132}\) Lexmark equipped its cartridges with microchips used for verification, to encourage customers only to use Lexmark cartridges.\(^{133}\) Static Control sold microchips which allow competitors of Lexmark to refurbish and resell Lexmark cartridges.\(^{134}\) Static Control alleged that Lexmark issued false advertising to the effect it was illegal to use static controls microchips.\(^{135}\) Reasoning that the provision was intended to protect against unfair competition, most courts had limited standing to competitors.\(^{136}\) Under this approach, Static Control would lack standing to sue Lexmark for false advertising.

¶34 The Supreme Court took a slightly broader view. The statute allows a suit by “any person who believes that he or she is or is likely to be damaged by such act.”\(^{137}\) The court did not read the language would allow anyone to sue for false advertising.\(^{138}\) Rather, the Court limited standing to those with interests “within the zone of interests protected by the law invoked.”\(^{139}\) For false advertising, that would be required that “a plaintiff must allege an injury to a commercial interest in reputation or sales” and “economic or reputational injury flowing directly from the deception.”\(^{140}\) That would not include consumers or business misled by false advertising into buying goods or services, or parties indirectly harmed by false advertising, such as suppliers of a company whose sales plummeted due

to falsities. But it did include Static Control. Lexmark’s false advertising allegedly stated that Static’s Control’s products were illegal, harming Static Control’s sales.

B. *Ferring Pharmaceuticals v. Watson Pharmaceuticals*

¶35 The Supreme Court in *eBay* altered the general approach of automatically granting injunctions once infringement was shown in patent cases. There are some arguments that injunctions should be more readily granted in trademark actions. Patent cases often involve large damage, but trademark actions less so. Trademark infringement requires showing the use of a symbol that is likely to cause confusion or deception. Injury to reputation may not be as readily remedied with monetary damages. Similarly, some courts have applied a presumption of automatic harm in false advertising cases, on the theory that a “misleading comparison to a specific competing product necessarily diminishes that product’s value in the minds of the consumer.”

¶36 *Ferring Pharmaceuticals* rejected that presumption. The court noted that some courts have extended the *eBay* analysis to copyright cases. It reasoned that *eBay* was based not on the special characteristics of patents, but rather on general principles of equity that govern when the powerful remedy of an injunction should be imposed. Before ordering a defendant to shut down a line of business, a court should normally require actual, not merely presumed, harm. If harm is indeed so likely to occur in a false advertising case, then it should be easy for the plaintiff to show harm resulted. In *Ferring Pharmaceuticals*,

the court further held, there was not a sufficient showing of irreparable harm.\textsuperscript{153} Watson allegedly broadcast false statements about a pharmaceutical in a webcast to medical professionals.\textsuperscript{154} The statements were no longer available and there was no evidence that they would actually affect whether doctors prescribed and patients used the pharmaceutical.\textsuperscript{155}

\textbf{C. Elliot v. Google Inc.\textsuperscript{156}}

Aspirin, Cellophane, Dry ice, Escalator, Laundromat, Mimeograph, Pilates, Thermos, Trampoline and Zipper all began as brand names and ended as generic names for a product. In some cases, the product was patented, so only the patentee could sell it, making the patentee’s name especially likely for public adoption. “Thermos,” from Thermos Corp., is easier to say than “Double walled vessel with a space for a vacuum between the walls.”\textsuperscript{157} A trademark that becomes generic, the very name for the product or service, is no longer a trademark.\textsuperscript{158} Rather, anyone can use the term to market their product. In the Internet world, some brands quickly go from nothing to world-famous. How hazardous is that for their legal status?

\textit{Elliot v. Google} addressed the question with today’s foremost example.\textsuperscript{159} People refer to "googling" for information, whether the search engine used is Google, Bing, Baidu, or something else.\textsuperscript{160} Has GOOGLE become generic, meaning it is no longer a valid mark?

\end{itemize}
The court said no: "As one scholar has stated, 'top-of-mind use of a trademark in its verb form, far from indicating the mark’s generic status, may well indicate the enduring fame of the brand.' 161

D. Blackhorse v. Pro-Football, Inc.162

Trademark law also differs from patent and copyright in denying coverage on moral grounds. The Lanham Act denies registration to a mark that consists "of or comprises immoral, deceptive, or scandalous matter; or matter which may disparage or falsely suggest a connection with persons, living or dead, institutions, beliefs, or national symbols, or bring them into contempt, or disrepute" 163 Whether registration of the “Washington Redskins” mark should be cancelled as being disparaging of Native Americans has been the subject of long-running litigation. 164 A proceeding begun in 1992 before the US Patent and Trademark Office led to a cancellation, which the courts overturned in 2009 on the grounds of laches, on the theory that the plaintiffs had waited too long after registration of the mark in 1967. 165

In Blackhorse, plaintiffs, too young to have filed any sooner, brought claims protesting the Washington Redskins name and logo. 166 The TTAB held that the various trademark registrations used by the Washington Redskins “must be cancelled because they were disparaging to Native Americans at the respective times they were registered, in violation of Section 2(a) of the Trademark Act of 1946, 15 U.S.C. § 1052(a).” 167 Regardless of whether the courts affirm on appeal, the practical effects of the decision are limited. The decision simply cancels the federal registration of the mark, as opposed to ending ownership of the mark itself. The mark may still continue as an unregistered mark, but whether the team can enforce unregistered mark would depend on yet more litigation. Social developments outside the legal system may bypass the courts.

E. Specht v. Google, Inc.168

Trademark rights (again in distinction to patent and copyright) depend on use. Continued rights require continued use. 169 A dot-com company used the mark “Android Data” for e-commerce software but stopped operating in 2002. 170 Some brand owners that discontinue a product keep the trademark rights by continuing minimal use of the mark in commerce. But the dot.com did not take that course. 171 By ceasing use with intent not to

use the mark anymore, it abandoned the mark. 172 When Google later made “Android” a famous signifier for a smartphone operating system, the former owner of Android could not prevent Google obtaining the rights in the mark.173 The case suggests that parties that discontinue products may be well advised to follow the practice of continuing using the marks if they might have commercial value.174

F. Gutter Topper Ltd. v. Sigman & Sigman Gutters, Inc.175

Relatively unsettled is whether liability for intellectual property infringement is dischargeable in bankruptcy.176 Bankruptcy discharge of debts will not apply to liability “for willful and malicious injury by the debtor to another entity or to the property of another entity.”177 Gutter Topping shows there may be interplay between awards of attorney’s fees and whether the liability is dischargeable. The court applied Sixth Circuit precedent requiring that attorney’s fees may be awarded in trademark cases where “the infringement was malicious, fraudulent, willful, or deliberate.”178 The defendant used the plaintiff’s mark after the licensing agreement had ended, for products clearly not within the scope of any permission granted, and even after the infringement suit had begun.179 The court held the conduct to be “willful and malicious” for the purpose of awarding attorney’s fees.180 The court also noted that “willful and malicious” was the standard for denying bankruptcy discharge, although the court was careful not to opine on the question of dischargeability, which would be addressed separately in the debtor’s bankruptcy proceeding.181

G. Speare Tools, Inc. v. Klein Tools, Inc.\textsuperscript{182}

Speare Tools sold its adjustable hole saw in clear plastic packages.\textsuperscript{183} When competitors adopted similar packaging, Speare Tools claimed infringement of trade dress.\textsuperscript{184} Functional matter is not protectable as a trademark.\textsuperscript{185} Speare Tools argued that use of clear plastic packaging was not functional, because there were many other options open for competitors to package their tools.\textsuperscript{186} The court took a broader view of functionality, relying on the Supreme Court’s statement in \textit{TrafFix} that a design feature is functional if it is "essential to the use or purpose of the article or if it affects the cost or quality of the article."\textsuperscript{187} The court also declined to limit the broad view of functionality to product design, as opposed to product packaging.\textsuperscript{188} The snug, see-through plastic packaging was functional in several ways:

(1) cheaper to produce (because of the use of minimal packaging); (2) stronger (because of the stepped sides on the blister package); (3) more appealing to consumers (by reducing cost, revealing the parts of the product at the point of sale, and including photos and instructions showing how the product is used); and (4) more appealing to retailers (because of the added strength, lower cost, nesting capability of the blister packages, and the use of information provided to consumers at the point of sale).\textsuperscript{189}

The case makes an interesting contrast to the \textit{Oracle v. Google} holding on functionality in copyright law.\textsuperscript{190}

H. Sandybeachgifts.com v. Amazon.com, Inc.\textsuperscript{191} & Ohio State Univ. v. Skreened Ltd.\textsuperscript{192}

\textit{Sandybeachgifts} and \textit{Skreened} bookended the scope of liability for retail web site owners for their merchants’ sale of infringing products. In the former case, Amazon.com was not liable for infringement by associates in Amazon’s marketing program.\textsuperscript{193} The associates were independent businesses that allowed Amazon sales through their own sites.\textsuperscript{194} Amazon could terminate the sellers’ participation in the program, but did not share ownership or have operational control over the sellers.\textsuperscript{195}

¶45 By contrast, in Skreened, a T-shirt printing site argued that it was not liable for selling shirts bearing counterfeit trademarks, because the designs had been uploaded by customers.196 Defendants argued that they should not be liable, because they at least attempted to avoid infringement, by instituting an “autohold” process when they received complaints from trademark owners.197 Despite the half-hearted attempted to avoid infringement, defendants printed numerous infringing shirts.198 The cost of avoiding infringement was no defense: “there is no exception in trademark law for infringers who take an ostrich approach to policing their business activities and complying with the law.”199

¶46 The Supreme Court’s decision in MedImmune, Inc. v. Genentech, Inc. lowered barriers to challenging the validity of intellectual property.202 The Court held that a party could bring a declaratory judgment action provided there was an actual controversy,

196 16 F. Supp. 3d at 917.
197 Id. at 916.
198 Id. at 916-17.
199 Id. at 917.
200 Airs Aromatics, LLC v. Victoria’s Secret Stores Brand Mgmt., 744 F.3d 595 (9th Cir. 2014).
201 La Quinta Worldwide LLC v. Q.R.T.M., S.A. de C.V., 762 F.3d 867 (9th Cir. 2014).
rejecting cases requiring a higher standard. \textsuperscript{203} \textit{Airs Aromatics} rejected an attempt to further lower the standard in trademark cases. \textsuperscript{204}

The trademark statute allows courts to cancel a mark for invalidity. \textsuperscript{205} The \textit{Airs Aromatics} court noted the trademark statute provides that “cancellation is available in ‘any action involving a registered mark.’” \textsuperscript{206} That language does not provide an independent cause of action to cancel a mark. \textsuperscript{207} Rather, it provides a possible remedy in an action involving a mark, where the court already has jurisdiction, such as an infringement or declaratory judgment action. \textsuperscript{208} Converting every statutory provision that gives powers to a court into a jurisdictional provision would greatly multiply the routes to federal jurisdiction. It would also negate the limits on jurisdiction. Moreover, a party seeking cancellation may already file a cancellation proceeding in the US Patent and Trademark office, an appropriate venue to begin consideration of whether that office should cancel a mark.

By the same token, the same circuit ruled in \textit{La Quinta Worldwide} that the statutory requirement that infringing use of a trademark be a “use in commerce” was not a jurisdictional requirement. \textsuperscript{209} The trademark statute provides that trademark infringement is a “use in commerce” of a symbol confusingly similar to a mark may infringe. \textsuperscript{210} But the relevant provisions provide a cause of action, rather than jurisdiction to hear the case. \textsuperscript{211} Rather, the jurisdictional provision of the trademark statute provides broad jurisdiction over cases arising under the statute. \textsuperscript{212}

\textit{J. Flying Pigs, LLC v. RRAJ Franchising, LLC}\textsuperscript{213}

Flying Pigs sought to enforce an equitable lien for failure to pay rent by foreclosing on federally registered trademarks. \textsuperscript{214} The Fourth Circuit held that a federal court did not have jurisdiction to hear the case. \textsuperscript{215} Although a federally registered trademark was involved, the action was not brought under the federal trademark statute and raised no question of federal law. \textsuperscript{216} There is considerable uncertainty about, at the outset of a financing transaction, whether federal or state law governs the requirements of notice when making a loan using intellectual property as collateral. \textsuperscript{217} If \textit{Flying Pigs} is followed, there

will be less uncertainty at the end of a financing transaction, as to which law governs when the creditor seeks to sell the collateral upon default by the debtor.

K. Webceleb, Inc. v. Procter & Gamble Co.218

Webceleb reinforces a point that evidently needs to be repeated.219 A trademark owner does not own the word, rather only the right to prevent confusingly similar uses with respect to sales of goods or services.220 The defendants used “Favorite Web Celeb” as the category in an awards show and on a related web site.221 Unbeknownst to them, WEBCELEB was a registered mark.222 But those uses of a similar phrase would not confuse any potential consumer about the source of relevant goods or services.223 A trademark, unlike a patent or copyright, does not bestow a broad set of exclusive rights in the relevant information.224

III. COPYRIGHT

A. Oracle America, Inc. v. Google Inc.225

Even as Alice put the validity of many software patents in question, Oracle v. Google supports thicker copyright protection to software than leading cases.226 Copyright protects

221 Id.
222 Id.
223 Id.
224 Id. at 607-08 (“Any minimal confusion here is the "risk the plaintiff accepted when it decided to identify its product with a mark that uses a well known descriptive phrase.") (quoting KP Permanent Make-Up, Inc. v. Lasting Impression I, Inc., 543 U.S. 111, 122 (2004)).
226 Id.
only creative expression, not functional matter.\footnote{17 U.S.C. § 102(b) (2012) ( “In no case does copyright protection for an original work of authorship extend to any idea, procedure, process, system, method of operation, concept, principle, or discovery, regardless of the form in which it is described, explained, illustrated, or embodied in such work.”).} Software qualifies for copyright protection, as a literary work,\footnote{17 U.S.C. § 101 (2012).} but the trend of authority had been to give thin protection. \textit{Oracle} potentially reverses that trend, creating a split in approach between the circuit courts.\footnote{750 F.3d at 1358.}

¶52 To enable Android, the operating system for smart phones, to run Java, Google copied many of Java’s API’s (application programming interfaces).\footnote{Id. at 1350-51.} Android copied the names and headers for the Java modules. For example, Google would copy the header “java.lang.Math.max,” for a method that compares numbers.\footnote{Id. at 1349.} Google wrote its own code that does the comparison and returns a result.\footnote{Id.} Java programmers could readily write apps for Android.\footnote{Id. at 1349.} This increased the number of software developers who could write Android apps, and would allow them to use some of the code they had written for other Java projects.\footnote{Id. at 1350-51.}

¶53 The issue was whether Google had copied protected creative expression, when it copied the names, organization of those names, and functionality of 37 out of 166 packages in the Java API.\footnote{Oracle Am., Inc. v. Google Inc., 750 F.3d 1339, 1353 (Fed. Cir. 2014).} The Federal Circuit reasoned that copyright protects Java’s “structure, sequence and organization.”\footnote{Id.} Because the makers of Java could have used different names and organization for the API’s, the names that were chosen represented creative expression, not just functional elements.\footnote{Id. at 1366-68.}

¶54 The Federal Circuit rejected application of the approach taken by the First Circuit in \textit{Lotus v. Borland}.\footnote{Lotus Dev. Corp. v. Borland Int’l, Inc., 49 F.3d 807 (1st Cir. 1995).} \textit{Lotus} had held that the menu command structure for a spreadsheet was a noncopyrightable “method of operation.”\footnote{Id. at 815.} The menu command structure provided commands for spreadsheet users, such as Print, Copy, Subtract, and arranged them in a hierarchy.\footnote{Id. at 817.} By copying that hierarchy, the defendant enabled the plaintiff’s former users to readily use defendants’ spreadsheet software\footnote{Id. at 818.} – not unlike Java developers in \textit{Oracle}. This holding, that the menu hierarchy was an uncopyrightable method of operation, was rejected in \textit{Oracle}, in favor of using the more detailed abstraction-comparison-filtration analysis.\footnote{See Oracle Am., Inc. v. Google Inc., 750 F.3d 1339, 1365-66 (Fed. Cir. 2014).}

¶55 How wide the circuit split is remains to be determined. The Federal Circuit did not conclude that Google necessarily infringed the copyright in Java.\footnote{Id. at 1377.} Rather, it remanded
the case on the issues of whether Google’s copying was permitted in order to copy nonprotected functional expression and whether Google was protected by fair use. 244 So the Federal Circuit and First Circuit reached slightly different conclusions that had large impact for litigation of software copyright cases. 245 The First Circuit, by holding that interface specifications were not protected, as a method of operation, simplified the analysis. 246 The Federal Circuit requires more steps in the litigation: First, determining whether there are separate creative elements in interfaces, and then seeing whether copying of any protected expression is permitted under various doctrines, such as copying to implement functionality or copying permitted under fair use. 247 The application of those doctrines, in turn, will introduce a number of legal and factual issues not required under the First Circuit approach in Lotus. Fair use, for example, requires consideration of four factors, much more broad than considering simply the issue of functionality. 248

For now, Oracle casts a shadow on the practice of copying interfaces. The WINE project, for example, is a free software project that allows users to run Windows programs on Linux systems. 249 WINE relies on using Windows applications programming interfaces. 250 It could be susceptible to infringement claims if courts read software copyright broadly.

B. ABC, Inc. v. Aereo, Inc. 251

Digital technologies rely on copying, so courts interpreting words in the copyright statute can have broad implications on technology. The second paragraph of the definition of “public performance” (called the “transmit clause”) was added to the copyright statute to cover rebroadcasting by cable companies. 252 In early days, cable companies would capture broadcast television shows on antennas and rebroadcast the shows over their cable network. 253 The Supreme Court had held that this was not a public performance, and so the cable company did not need permission from the television show copyright holder. 254 Those copyright holders promptly convinced Congress to include such rebroadcasting in their exclusive rights, adding the “transmit clause” to the copyright holder’s public performance right. 255 In 2008, the Second Circuit interpreted the clause narrowly. 256 The

253 Id. at 2504.
255 Id. at 2506 (“Congress also enacted the Transmit Clause, which specifies that an entity performs publicly when it ‘transmit[s] . . . a performance . . . to the public.’ §101; see ibid. (defining ‘[t]o “transmit” a performance’ as ‘to communicate it by any device or process whereby images or sounds are received beyond the place from which they are sent’).”).
256 Cartoon Network LP v. CSC Holdings, Inc., 536 F.3d 121 (2d Cir. 2008).
Second Circuit had held that there was no public performance where customers of Cablevision used remote storage provided by Cablevision to record programs and watch them at their leisure.\textsuperscript{257} The court noted the broad scope of the transmission clause, applying where members of the public receive the transmission “in the same place or in separate places and at the same time or at different times.”\textsuperscript{258} But the clause applies only to members of the public “capable of receiving the performance.”\textsuperscript{259} Because the performance is the single copy transmitted, the court reasoned, only the single customer was capable of receiving it, meaning that it was not a public performance.\textsuperscript{260} Rather, many Cablevision customers could make private performances of the same program from their individual remote storage devices provided by Cablevision.\textsuperscript{261}

\textit{Aereo} created a convoluted rebroadcasting system designed to piggyback on the \textit{Cablevision} decision.\textsuperscript{262} Aereo’s system had thousands of tiny antennas, each coupled with a small storage device.\textsuperscript{263} An Aereo customer could control their antenna and storage to record programs or rebroadcast them to the customer.\textsuperscript{264} The Second Circuit again held that meant that each customer had a private performance, even if thousands of customers were watching the same broadcast show.\textsuperscript{265} The Supreme Court reversed, looking both to the broader language (“in the same place or in separate places and at the same time or at different times”) and to the purpose of the statute.\textsuperscript{266} In the Court’s view, Aereo was doing the same sort of rebroadcasting that the definition was designed to target:

Aereo sells a service that allows subscribers to watch television programs, many of which are copyrighted, almost as they are being broadcast. In providing this service, Aereo uses its own equipment, housed in a centralized warehouse, outside of its users’ homes. By means of its technology (antennas, transcoders, and servers), Aereo’s system “receive[s] programs that have been released to the public and carr[ies] them by private channels to additional viewers.”\textsuperscript{267}

The question after \textit{Aereo} is how broadly it applies. The Court took care not to cast a cloud on technological development, stating that it was not ruling on issues of cloud computing, remote storage DVRs, and other novel issues to arise in other cases.\textsuperscript{268}

C. Petrella v. MGM\textsuperscript{269}

\textit{Petrella} provides copyright owners some latitude in enforcement. Copyright has a three-year statute of limitations.\textsuperscript{270} If a defendant continues to infringe, however, each new infringement is separate, starting a new three-year period for filing suit based on the new infringements.\textsuperscript{271} Where the 1980 film \textit{Raging Bull} allegedly infringed a 1963 screenplay, the copyright holder brought an action in 2009 seeking to recover for infringements (such as public performances) that occurred in 2006 and thereafter.\textsuperscript{272} MGM sought the application of the equitable doctrine of laches, under which a defendant that unreasonably delays in enforcement may lose its right to damages.\textsuperscript{273} The Supreme Court held that where Congress has set a statutory time limit, there is no place for equity to add an additional time limit.\textsuperscript{274} The Court noted (among other reasons), that a contrary rule might create more copyright litigation, because copyright owners would fear losing their rights if they did not sue even for trivial infringement.\textsuperscript{275}

D. Garcia v. Google, Inc.\textsuperscript{276}

Cindy Lee Garcia played a minor role in a film with the working title “Desert Warrior.”\textsuperscript{277} After the project was abandoned, the pragmatic producer used the footage of her scenes in an anti-Islamic film titled “Innocence of Muslims,” dubbing lines over her performance.\textsuperscript{278}

\textsuperscript{277} Id. at 932.
\textsuperscript{278} Id.
¶62 The Ninth Circuit held that, although the director held the copyright in the film, Garcia might have a copyrightable interest in her performance.279 Copyright applies to an original work of authorship, fixed in a tangible medium.280 The court made a convincing argument that Garcia made an original contribution, which requires some creativity: “But an actor does far more than speak words on a page; he must ‘live his part inwardly, and then . . . give to his experience an external embodiment.'”281 That embodiment includes body language, facial expression, and reactions to other actors and elements of a scene. Id. at 218-219. Otherwise, “‘every shmuck . . . is an actor because everyone . . . knows how to read.'”282

¶63 But the court did not explain how a performance would qualify as a work of authorship. This view seems to make a film an amalgamation of many works of authorship, as would be any other work with contributions from more than one person. That doctrinal innovation would have considerable practical consequences, making a potential author out of anyone with any input into a work, greatly increasing the need for negotiation and transaction costs.283 Before the end of the year, the Ninth Circuit decided to rehear the case en banc.284 Perhaps the case will live on mainly in copyright law courses.

E. Oracle Corp. v. SAP AG285

Oracle provides guidance on awards of reasonable royalties in copyright cases. The court overturned a jury award of some $1.3 billion, because Oracle’s evidence as to the value of damages flowing from copyright infringement by unauthorized use of software was speculative, with no showing of how much income SAP gained from the infringement.286 But the court showed several ways in which a plaintiff could show a reasonable royalty, which would be what the parties likely would have agreed on had they negotiated a license.287 First, the court rejected the theory that there could be no hypothetical license because Oracle never licensed its software.288 The very point of figuring out a hypothetical license fee is that there was no actual transaction.289 Second, evidence of revenue from infringement should be more than simply projections of hoped-for income, which were not linked directly to the infringing activity.290 Likewise, the cost

to plaintiff of granting a license could be shown more directly than simply how much it cost to acquire the entities that made the software, because the software could be licensed to multiple licensees. 291 Lastly, actual licenses granted with respect to the subject matter would provide objective evidence to support the terms of a hypothetical license. 292

F. Authors Guild, Inc. v. HathiTrust293

§65

Does fair use protect the Google Book project? Google is attempting to scan the world’s books, presently working with a number of libraries and Google’s innovative scanning technology. 294 Authors Guild, Inc. v. HathiTrust held that fair use protected unauthorized scanning and compiling of books into a searchable database. 295 The case involved only a limited set of purposes, so it is only preliminary to applying fair use to Google Books as a whole. 296 Google scanned books from the collection of member libraries, such as universities. 297 Any web user could search the database and receive results showing only books containing the search terms, along with page numbers (no snippets of text, unlike Google Books). 298 Member libraries could use the database to enable readers with disabilities (such as blindness or inability to turn pages) to use adaptive technologies, such as software that magnified the text or read it aloud. 299 Member libraries could also use electronic copies to replace lost originals. 300 Fair use protected these limited uses. The case leaves open broader questions, such as searches that return portions of texts and provide information used for commercial purposes, not to mention advertising revenue.

G. Cambridge University Press v. Patton301

§66

Fair use is a bulwark of copyright law, but somewhat unpredictable, perhaps because the relevant rule is a four factor test with little guidance as to how to weigh the factors. 302 The trial court in Cambridge University Press had introduced a little bright line guidance. 303 For university copying for coursebooks, it had held that copying 10 percent of a work or just one chapter was presumptively fair use. 304 The appellate court reversed

Sixties musicians, Flo & Eddie of The Turtles, truly keep on truckin’. The 1976 federal Copyright Act held that the public performance right in pre 1972 sound recordings (as opposed to the copyright in musical works) was not governed by federal law. Decades later, two federal trial courts have held that pre 1972 sound recordings are recognized by state law copyright. If the decisions in the key jurisdictions of California and New York survive appeal, then broadcasters may have to pay for rights to play songs that they have long played for free (not to mention damages for recent use). Arranging such transactions may be cumbersome, because existing licensing statutory schemes apply only to works under federal copyright. Such recordings may also trigger liability for online services such as YouTube, because the immunity of online service providers under the DMCA arguably extends only to federal copyright. Flower power may disturb the establishment once again.

Inhale, Inc. v. Starbuzz Tobacco, Inc.

Inhale addressed the same general issue as Oracle vs. Google, the distinction between copyrightable expression and noncopyrightable functional matter. The product at issue was the design of a water pipe system for smoking. Broad copyright protection in product design would effectively give patent protection for an unpatented product. The shape of the hookah water container was not subject to copyright protection. Although the shape was distinctive and artistic, it did not have aesthetic elements that were separable

318 Flo & Eddie II; Flo & Eddie I.
320 Inhale, Inc. v. Starbuzz Tobacco, Inc., 739 F.3d 446 (9th Cir.) opinion amended and superseded on denial of reh’g, 755 F.3d 1038 (9th Cir. 2014), as amended (July 9, 2014) cert. denied, 135 S. Ct. 758 (2014).
321 Id. at 448-49.
322 Id. at 447.
323 Id. at 448-49.
If the shape of the water container were changed, it would work differently. \textsuperscript{325}

\textit{Inhale} and \textit{Oracle} involve quite different subject matter, software and a hookah water container—yet they consider the same issue—functionality. Under \textit{Oracle}’s reasoning, perhaps \textit{Inhale} would be decided differently, because there are many different shapes of water containers that would serve the same general function. \textsuperscript{326} Likewise, \textit{Inhale}’s approach could yield a different result in \textit{Oracle}: changing the API’s would make the software function in a different way. \textsuperscript{327} The difficult question is whether the cases are legally inconsistent or simply governed by the difference in subject matter.

\textbf{K. AF Holdings, LLC v. Doe\textsuperscript{328}}

Various enterprises seek to find a way to recover from alleged small-scale copyright infringements. AF Holdings rejected an attempt to bring infringement actions \textit{en masse}.\textsuperscript{329} The plaintiffs bought the copyright to a film and sued 1,058 anonymous defendants, identified only by IP address, alleging that each had downloaded the film using BitTorrent.\textsuperscript{330} Multiple defendants may be joined for actions “with respect to or arising

\textsuperscript{324}\textit{Id}.
\textsuperscript{325}\textit{Id}.
\textsuperscript{326} Inhale, Inc. v. Starbuzz Tobacco, Inc., 739 F.3d 446, 448-49 (9th Cir.) (applying test based on existing shape, not alternatives).
\textsuperscript{327} Oracle Am., Inc. v. Google Inc., 750 F.3d 1339, 1368 (Fed. Cir. 2014) (applying test based on availability of alternatives).
\textsuperscript{328} AF Holdings, LLC v. Does 1-1058, 752 F.3d 990 (D.C. Cir. 2014).

out of the same transaction, occurrence, or series of transactions or occurrences." But, getting the film from different BitTorrent swarms on dates months apart was not the same series of transactions, any more than “two individuals who play at the same blackjack table at different times.”

L. Kienitz v. Sconnie Nation LLC

¶72 The Seventh Circuit held that it was fair use to use a photograph of a mayor, downloaded from the city’s website, to make a T-Shirt mocking the mayor. The key was that little of the creative expression of the original was used:

Defendants removed so much of the original that, as with the Cheshire Cat, only the smile remains. Defendants started with a low-resolution version posted on the City's website, so much of the original's detail never had a chance to reach the copy; the original's background is gone; its colors and shading are gone; the expression in Soglin's eyes can no longer be read; after the posterization (and reproduction by silk-screening), the effect of the lighting in the original is almost extinguished. What is left, besides a hint of Soglin's smile, is the outline of his face, which can't be copyrighted. Defendants could have achieved the same effect by starting with a snapshot taken on the street.

¶73 The court’s pragmatic approach varies from fair use case law in two significant ways. First, to make the T-Shirt, the defendants had to make copies along the way in the process

332 752 F.3d at 998.

334 Id. at 759.
335 Id.
of making the design.\textsuperscript{336} In other cases, such as reverse-engineering or data-base extraction, courts have considered whether such intermediate copies were infringing or were fair use\textsuperscript{337} (although the Seventh Circuit noted that a low-resolution copy was used).\textsuperscript{338} Second, the court did not look to whether the use was “transformative,” a question that other courts give great weight in fair use.\textsuperscript{339} The court stated that it was “skeptical” of that approach, because it gives little weight to the list of factors in Section 107 and because equating “transformative” with fair use threatens to do away with the copyright owner’s exclusive right to make derivative works.\textsuperscript{340}

IV. TRADE SECRET

A. Loftness Specialized Farm Equip., Inc. v. Twiestmeyer\textsuperscript{341}

Contract law may provide an alternative or supplement to trade-secret protection. Showing breach of a nondisclosure or non-compete agreement does not require as high a showing as misappropriating a trade secret.\textsuperscript{342} Breach of contract does not require the same elements as misappropriation and the information at issue need not be proved to be a trade secret.\textsuperscript{343} The contract at issue in \textit{Loftness} defined protected information much more broadly than a trade secret (“[s]uch information that [T & A] considers to be proprietary and/or confidential”) and the acts that constituted breach likewise more broadly than the wrongful actions that would constitute misappropriation (promising not to use T&A’s

\textsuperscript{336} \textit{Id.} at 757.
\textsuperscript{337} See Sega Enters. Ltd. v. Accolade, Inc., 977 F.2d 1510 (9th Cir. 1992) (applying fair use to intermediate copying for reverse engineering).
\textsuperscript{338} 766 F.3d at 759.
\textsuperscript{339} \textit{Id.} at 758.
\textsuperscript{340} \textit{Id.}
\textsuperscript{341} Loftness Specialized Farm Equip., Inc. v. Twiestmeyer, 742 F.3d 845 (8th Cir. 2014). By contrast, where a party freely allows information to circulate without restrictions, a nondisclosure agreement with one party will not make the information a trade secret. \textit{See} nClosures Inc. v. Block & Co., 770 F.3d 598 (7th Cir. 2014).
\textsuperscript{342} 742 F.3d at 850-51.
\textsuperscript{343} \textit{Id.}
"confidential information in any way that could be construed as being competitive of [T & A’s] business"). The appellate court held it was error to grant summary judgment on the grounds that the defendant had not misappropriated a trade secret. Rather, the court remanded for the question of whether the defendant had breached its broader obligations under the contract.

B. United States v. Auernheimer

Auernheimer promised to be key precedent for trade secret practice, but the court decided the case on other grounds. The Computer Fraud and Abuse Act ("CFAA") prohibits unauthorized access to computers. Courts have differed on how to construe unauthorized access. Suppose an employee uses her work computer to load up on valuable trade secrets from her employer’s stock, then takes the information to a competitor or her own start-up. Some courts would hold this would not be unauthorized access, because her employer gave her access to the files. Other courts may hold it unauthorized, because she exceeded the scope of authorization given – her employer did not give her permission to take the trade secrets for her own purposes.

Auernheimer is not an employee case, but was widely watched on the issue of unauthorized use. Auernheimer exploited a security flaw to visit public AT&T web sites (by making it look as if he were using an iPad) and get email addresses of iPad users from
AT&T. Unauthorized access? Auernheimer argued not, because he was visiting sites that were open to the public. The prosecution, successful in the trial court, argued that it was because Auernheimer’s software was configured, in a broad and anthropomorphic sense, to deceive AT&T’s web server, negating any authorization. On appeal, the Third Circuit did not reach this juicy issue, holding instead that the prosecution had been brought in the wrong district. Auernheimer acted in Fayetteville, Arkansas, accessing servers in Dallas, Texas and Atlanta, Georgia. The case was brought in New Jersey, which had no apparent connection to the case. The conviction was vacated, leaving the uncertainty around the CFAA unchanged.

C. Newell Rubbermaid, Inc. v. Storm

A contractual promise in an employment agreement not to compete may serve as a proxy for trade-secret protection. Trade secret misappropriation by an employee may be very difficult to show. A promise not to work for competitors may reduce the chance that a former employee may use trade secrets – although such clauses must be limited to their reasonable scope, both to protect the employee’s ability to work in the market and to foster the general policy of freedom of flow of experts and expertise.

Covenants not to compete are enforceable only if reasonable, because of the limitation on the employee. But that does not make them any more difficult (in jurisdictions that enforce them) to agree to than other clauses. A restrictive covenant in a click-wrap employment agreement was enforceable, even where changes in employment terms were not made conspicuous. Rather, the terms fell within the reasonable expectations of the parties, despite the fact the employee did not read the agreement before agreeing. Even the most formalistic contract doctrines with respect to written contracts did not require proof that a party had read all provisions of a contract before being bound. That approach is more efficient than a regime that would require parties to spend time and resources reading (and documenting that reading) for every provision in a contract.

D. Core Labs. LP v. Spectrum Tracer Services, L.L.C.\textsuperscript{367}

¶79 In trade secret law, even post eBay, a showing of misappropriation may almost automatically lead to an injunction: when “a defendant possesses trade secrets and is in a position to use them, harm to the trade secret owner may be presumed.”\textsuperscript{368} The same overall framework for granting an injunction governs, but the requirement of irreparable harm is more easily met.\textsuperscript{369} Trade secret poses different risks than patent, copyright, and trademark. Not only is it misappropriation to use trade secret information wrongfully, it is misappropriation to simply wrongfully acquire the information.\textsuperscript{370} If the information becomes public, it will no longer be a trade secret.\textsuperscript{371} Courts readily grant injunctions to protect trade secrets, where wrongful behavior is involved.\textsuperscript{372} In Core Labs, former employees of the plaintiff took a secret software application and associated customer information to a start-up competitor, saving the cost of developing such information themselves and providing a market advantage.\textsuperscript{373}

E. Wang v. Palo Alto Networks, Inc.\textsuperscript{374} & ABB Turbo Systems AG v. TurboUSA, Inc.\textsuperscript{375}

¶80 Trade secret and patent law interact in many ways. An inventor may choose between keeping an invention secret and publishing it to get a patent. A patentee may use patent law to protect an invention, but also use trade secret processes in connection with practicing the invention, to have two lines of defenses against copiers.

Wang v. Palo Alto Networks involved a less common intersection. Wang alleged that his business partner had wrongfully disclosed trade secret firewall technology to Palo Alto Networks.\textsuperscript{376} Wang did not sue until after several years after the alleged disclosure, but alleged that the statute of limitations had not run because he learned of the disclosure only by reading newspaper accounts of Palo Alto’s initial public offering.\textsuperscript{377} But the information had been contained in published patent applications of Palo Alto, at a time when Wang was seeking his own patents.\textsuperscript{378} The court held that a trade secret owner was on constructive notice of other patent applications in the area of technology.\textsuperscript{379} Wang had the requisite notice to run afoul of the statute of limitations, which started running at that time.\textsuperscript{380}

\textsuperscript{367} Core Labs. v. Spectrum Tracer Servs., LLC, 532 Fed. App’x 904 (Fed. Cir. 2013) (Where defendant used plaintiff’s trade secret fracking software, there was irreparable harm and an injunction would apply).

In *ABB Turbo*, the alleged trade secret misappropriation likewise was long before the action was filed. 381 ABB Turbo alleged that a former employee handed over envelopes of cash to ABB employees for confidential business information for decades. 382 The information related to patents (which were also allegedly infringed). 383 Unlike *Wang*, there was no public information available to the trade secret owner disclosing the information. 384 The statute of limitations did not begin to run until ABB Turbo learned of the information sales. 385

**F. Altavion, Inc. v. Konica Minolta Systems Laboratory, Inc.*

The defendant in *Altavion* argued that there was a choice between trade secret and patent protection, at least for product design: “[g]eneralized ideas and inventions are protectable by patents and thus cannot be trade secrets.” 387 There is a boundary between copyright and patent: functional matter may be patentable, but is not subject to copyright. But trade secret and patent overlap in covering functional matter, such as product design. Rather, as the court emphasized, it is disclosure that separates trade secret from patent subject matter. 388 Until disclosure, both may potentially cover valuable information: if “a patentable idea is kept secret, the idea itself can constitute information protectable by trade secret law.” 389

Nor had the plaintiff lost trade secret protection by disclosing its general idea for digital stamping technology to potential partners. 390 It made it general idea public, but did not disclose its specific design implementation for the technology, which remained a trade secret. 391 Keeping trade secret protection does not require absolute secrecy, even about the existence of the technology itself. 392 Likewise, that design implementation would be disclosed when the product was sold to the public. But until that time, the implementation technology would be valuable because it had not been disclosed to others, and would remain a trade secret. 393

**G. Bianco v. Globus Medical, Inc.**

An idea for a product can be a trade secret. Misappropriation will lie, even if the defendant uses the idea for a different product than envisioned. 395 A trade secret may have broader value than simply instructing how to make a particular product, and may have

value in formulating other products as well. 396 The fact that the defendant may have supplied additional value, such as research or market analysis, will not absolve the defendant of liability for wrongfully using the protected information.

H. Mandel v. Thrasher (In re Mandel)398

¶86 Intellectual property encourages innovation. Intellectual property litigation can likewise result in innovation. Mandel v. Thrasher rejected the creative theory that, where an executive stole trade secrets, he authorized their disclosure on the part of the company.399 If the disclosure was authorized, then there would be no liability for wrongful disclosure. Such a rule would swallow much of trade secret law with respect to employees, not to mention insulate fiduciaries from responsibility for breach of their duties.400

¶87 The case also makes a holding similar to Oracle v. SAP, that an award of damages requires evidentiary support.401 The bankruptcy court held that the plaintiffs’ expert testimony did not establish an amount of damages recoverable under either a "lost asset" or "lost profit" theory. 402 The court nevertheless awarded the nice round amounts in damages of $1,000,000 and $400,000 to the respective plaintiffs, without any explanation. 403 The appellate court remanded the case for the lower court to conduct an evidentiary hearing or explain the basis of its award.404

I. Boston Scientific Corp. v. Lee;405 In re Valero Ref.-Tex.;406 Powder River Basin Reservation Council v. Wyoming Oil & Gas Conservation Commission,407 & In re Microbilt Corp.408

¶88 A party would not be permitted to do forensic imaging of a laptop in discovery, where the laptop contained trade secrets not related to the litigation and less intrusive means had been rejected during discovery discussions.409 Valero held that financial records which could qualify as trade secrets might not be discoverable in tax collection litigation, without a showing of particularized need.410 Powder River Basin held that fracking methods disclosed to the government might not be disclosed if they were protected as trade secrets. 411

On the flip side, sometimes a trade secret owner cannot get remedies from a confidant that discloses the trade secret, a nondisclosure agreement notwithstanding. For example, in In re Microbilt, Chex, a data provider, sued several of its resellers. In court filings, Chex included trade secrets, such as a customer list, provided to it by Microbilt under a confidentiality agreement. Microbilt’s action for trade secret misappropriation, by wrongful disclosure, foundered on the absolute litigation privilege, which protects disclosures to courts.

\[\text{J. Hallmark Cards v. Monitor Clipper Partners} \text{\textsuperscript{415}}\]

Hallmark Cards provided confidential market research, in Powerpoint format, to consultant Monitor Company Group under a nondisclosure agreement. Monitor Company group nonetheless sent the information on to its affiliate Monitor Clipper Partners, a private equity firm, which used it to acquire and manage a competitor of Hallmark Cards. Monitor Clipper Partners argued that the information was not a trade secret, because Hallmark had made public general conclusions based on the research. But as the court concluded, the data was valuable as basis for analysis: other parties might have reached other conclusions from the data. Total secrecy is not a prerequisite for trade secret protection.

\[\text{K. Purchasing Power, LLC v. Bluestem Brands, Inc.} \text{\textsuperscript{420}}\]

\textit{Bluestem} upholds the use of a clean room development in financial engineering, not unlike a clean room in software reverse engineering. As a step toward a possible merger, two retailers shared information under a non-disclosure agreement. The merger fell through. Bluestem Brands subsequently unveiled a payroll deduction plan to help buyers finance big purchases. Purchasing Power alleged the process was taken from information provided in confidence. Bluestem produced evidence that the process was developed independently by a team kept separate from those involved in the potential merger. Purchasing Power had no direct evidence that its information was used, only such “circumstantial” evidence as general similarities between the programs. The courts found no misappropriation.

owners. If independent development were not a defense in such settings, then parties might be more reluctant to enter into nondisclosure agreements, because they would lose the ability to develop information themselves that the other party already had.
